## Project Name: Leptop Selling agent..

Our **"Leptop Selling agent"** is a commercial agent. Which provides various types of leptop to it's client. We have laptops of different configurations here.

Main benefits of using this commercial agents are: we don't have to pay for the salary. This agent is easier to recruit than experienced sales executives with specialist knowledge. **"Leptop Selling agent"** provides informations about various types leptops configurations  to clients, by this clients can decide whether that particular goods are approphiate for them or not. Intelligent agents ask several questions to client so that it can understand what is the choice of clients and can read the mind of clients.

So customers are happy to get laptops according to their needs.

write('Would you want a ')

verify(laptop)

- The agent will ask if he will take the leptop.

grasp(asos) :- asos, !.

grasp(lenova) :- lenova, !.

grasp(apple) :- apple, !.

grasp(hp) :- hp, !.

grasp(acer) :- acer, !.

grasp(empty_basket).

-The  Agent customer will suggest the brand of laptop here.

verify(silver_color),

verify(ram_4),

verify(rom_500GB),

verify(ssd_slot_No),

verify(rom_1TB),

verify(inch_14).

-Then take the different requirments from the customers and show the laptop to the customers accordingly.

write(' Order is ready for sell')

-- And lastly the agent will be informed that his lasest laptop has been made as per his requirement.

------------ The End ------------
